

FILAINE12

Tips and Special Effects

Design (Alphabet) by K. Hanack - Embroidered by F. Seiler-Schulz

Just like embroidered by hand.

FILAINE is our special thread for high-quality embroideries that look "as if embroidered by hand". Due to the size 12 and the woolly look you may create beautiful embroideries in typical hand-made look or embroider designs for traditional costumes or colorful folklore patterns. Despite the fine wool structure, FILAINE is very robust in processing, produces hardly any lint and convinces with its high tear and abrasion resistance.

And with the help of our special brush **FILAINE-BRUSH** your embroideries will have a completely new look.

Light brushing over the embroidery roughens the surface thus creating a fluffy look.

For a particularly stylish look:

Combine different embroidery threads in the motif or brush the motif only partially.

Also works with cotton thread **COTTY12!**

Tips for embroidering, digitizing and brushing:

- Needle: ORGAN needle size 90 Choose the needle tip according to the project fabric.
- Embroidery program: must be specially digitized for a thread size 12
- (Sew stitches as far apart as possible, avoid short stitches. It is best to omit or reduce underlay stitches as far as possible. Reduce sewing speed if possible.)
- SOLVY prevents the stitches from disappearing into the fabric when embroidering on coarse fabrics, thus reinforcing the hand-made character. At the same time, it protects the surrounding textile when brushing.
- Apply only light pressure when brushing!
- Your own washing tests are absolutely necessary!
